

AUDIT SUMMARY

Marvel Dataset — Data Audit Report

Audit Objective

The audit was conducted to assess the **completeness, validity, consistency, uniqueness, and relational integrity** of the Marvel dataset before performing business analysis.

The audit covered three raw tables:

- marvel_master_raw
- marvel_ratings_raw
- marvel_cast_raw

Dataset Size

Table	Records
marvel_master_raw	161
marvel_ratings_raw	554
marvel_cast_raw	1,628

A. Master Table Audit

The Master table was audited for:

- Data completeness
- Valid classification flags
- Duplicate title + year combinations
- Universe consistency
- MCU canon consistency
- TV-series classification
- Animated-content classification
- MCU phase consistency
- Year validity
- Master ↔ Cast relationships
- Master ↔ Ratings relationships

Key Findings

Audit Area	Finding	Status
Total Master Records	161	✓
Duplicate title + year keys	0	✓
Invalid is_tv_series values	0	✓
Invalid is_animated values	0	✓
Invalid is_mcu_canon values	0	✓
Missing Universe	0	✓
Unexpected Universe values	0	✓
MCU marked non-canon	0	✓
Non-MCU marked canon	0	✓
Invalid year values	0	✓
TV-series classification inconsistencies	41	⚠
Missing / N/A type values	47	⚠
MCU records with Non-MCU phase	25	⚠ Reviewed
Non-MCU records with MCU Phase	4	●
Animated TV/season classification indicators	7	⚠ Overlap with TV-series issues

Important audit conclusion: The 25 MCU records carrying mcu_phase = 'Non-MCU' were **not automatically treated as errors**, because the dataset's MCU universe/canon classification can include Marvel television content that was not assigned to an official MCU Phase. They were therefore retained pending a defensible classification rule.

B. Ratings Table Audit

The marvel_ratings_raw table underwent structural, relational, source, and score-quality checks.

Audit Area	Result	Status
Total Rating Records	554	✓
Missing Titles	0	✓
Missing Years	0	✓
Missing Sources	0	✓

Duplicate title + year + source	0	✓
Rating → Master orphan records	0	✓
Invalid non-blank scores	0	✓
Out-of-range scores	0	✓
Standardized rating sources	4	✓
Missing score values	185	i

The four standardized rating sources were:

- IMDb
- Metacritic
- Rotten Tomatoes
- TMDb

The **185 missing scores** were treated as legitimate missing-source coverage rather than invalid values.

C. Cast Table Audit

The `marvel_cast_raw` table was checked for its relationship with the Master table.

Audit Area	Result	Status
Total Cast Records	1,628	✓
Distinct TMDb IDs	113	✓
Orphan Cast Rows	0	✓
Orphan Cast TMDb IDs	0	✓

The Cast table therefore maintained valid relationships with the Master dataset.

D. Final Cross-Table Audit

The final integrity audit confirmed:

Check	Issues	Status
Ratings without matching Master	0	✓
Cast without matching Master	0	✓
Duplicate Master keys	0	✓

Duplicate Rating keys	0	✓
Invalid Rating Scores	0	✓
Invalid Master classification flags	0	✓
Missing Master Universe	0	✓
Non-MCU records with MCU Phase	0 after cleaning	✓

Audit Conclusion

The raw Marvel dataset was comprehensively audited for data quality, logical consistency, uniqueness, and cross-table integrity. All critical structural and numerical checks passed. Several classification inconsistencies were identified and documented for controlled cleaning.
