

CLEANING SUMMARY

Marvel Dataset — Data Cleaning Report

Cleaning Objective

The objective of the cleaning phase was to correct **confirmed data-quality and classification issues** **without modifying the original raw tables**.

The raw tables were preserved as the source/audit layer.

Cleaning Architecture

RAW DATA

CONTROLLED CLEANING

|

CLEAN DATA

A. Master Table Cleaning

1. TV-Series Classification Correction

41 confirmed TV/series records were identified where the title clearly indicated TV/season content but the dataset contained:

`is_tv_series = 0`

These were corrected to:

type = 'series'

is_tv_series = 1

Records corrected: 41

2. Non-MCU Phase Correction

4 non-MCU records were found carrying an MCU Phase (Phase 5/6).

These were corrected to:

mcu_phase = 'Non-MCU'

Records corrected: 4

3. Missing / N/A type Values

There were initially **47 missing/N/A type values**.

After investigation:

- **41** were confidently identified as TV/series records → corrected to series
- **6** were legitimate non-series/special/movie-type records where sufficient evidence was not available to assign a definitive category

The remaining 6 were therefore **intentionally retained as N/A rather than artificially classified**.

This preserves analytical integrity.

4. MCU Phase Classification

The **25 MCU records with mcu_phase = 'Non-MCU'** were deliberately retained.

Reason:

The dataset's MCU universe/canon classification is not necessarily equivalent to having an official MCU Phase assignment. Some Marvel television content can be grouped under the MCU universe while remaining outside the numbered MCU Phase structure used by the dataset.

Therefore, these records were **not forcefully assigned to Phase 1–6**.

B. Ratings Cleaning

No corrective changes were required to the actual rating records.

The ratings table had already passed:

- Score validity checks
- Score range checks
- Source consistency checks
- Duplicate checks

- Master relationship checks

Therefore:

marvel_ratings_clean is an exact validated copy of the audited ratings data.

C. Cast Cleaning

No corrective changes were required to the Cast data.

The Cast table had:

- **0 orphan records**
- **0 orphan TMDB IDs**
- Valid Master relationships

Therefore:

marvel_cast_clean is an exact validated copy of the audited cast data.

Final Clean Dataset

Clean Table	Records	Status
marvel_master_clean	161	✓ Validated
marvel_ratings_clean	554	✓ Validated
marvel_cast_clean	1,628	✓ Validated
Total	2,343	✓

Final Cleaning Validation

After cleaning, the following all returned **0 issues**:

- Invalid TV-series flags
- Invalid animation flags
- Invalid MCU canon flags
- Missing Universe
- MCU/non-MCU canon contradictions
- Movie/TV contradictions
- Series/TV contradictions
- Obvious TV titles still incorrectly marked as non-TV
- Non-MCU records carrying an MCU Phase

- Invalid year values
- Rating score violations
- Duplicate analytical keys
- Cast orphan records
- Rating orphan records
